

## Public Comment Form

The US Forest Service's Institute of Pacific Islands Forestry (IPIF), part of the Pacific Southwest Research Station, has purchased property in the Laupahoehoe area to serve as a Research and Education Center for the Laupahoehoe unit of the Hawaii Experimental Tropical Forest (HETF). Modifications to the purchased property and existing structures may include: modifications to existing buildings for offices, living space, classroom use and ADA compliance, new building construction for lodging, driveway reconfiguration, and road improvements for access to HETF unit. A facility constructed on State Land near the Forest entrance is proposed and plans include a covered area, storage areas, a vehicle wash station, restrooms and a parking area.

IPIF needs your assistance and input about the project.
